

Decode the Chart

Name: _____

Roll No: _____

For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

Regional Comparison - Q2 2025**Chart 1****Budget Allocation by Department (13 categories)****Chart 2****Storks Sighted vs. Human Births****Chart 3****Coffee Cups/Day vs. Typing Speed (WPM)****Chart 4**

1/10/2026

Session - I

ROLL NO: 10111110

Activity.

CHART 1:

BAR CHART

This chart is telling about the Regional comparison with the students enrolled in a program or course. But this does not have a exact reason for which the students are enrolled from four different regions.

This chart cannot be trusted blindly, because there is no proper info about the enrollment. But this chart is clear and understandable.

CHART - 2:

PIE CHART

This chart is trying to tell about the Allocation of budget from 12 different categories of department. Each category has different colors and since it is represented in pie chart, it looks easier. If there is percentage of department names in each section, that would be better.

I trust this because it has unique colors and understandable.

CHART 3:

LINE GRAPH.

This chart is trying to tell about the ~~off~~ strokes sighted and human births over a time period. The chart is good with the proper & color difference. Red shows the Human births and blue shows the strokes sighted.

But this chart is not trustable because there is not units for the axis and if 3 members are seeing this chart, one will say that it is in day, other will say it is in months and 3rd will say in years. So, this would be difficult.

If the units for the time period is mentioned, then that would be good.

CHART 4:

SCATTER CHART.

This chart is a scatter chart that tells about the Typing speed in Words per minute (WPM) and coffee cups per day. This has units in the axis and we can say the percentage of the categories.

Yes, I trust this chart that it shows the exact values.
